

# International Symposium

## Biopesticides

Innovative technologies and strategies for pest control

7-9<sup>th</sup> September 2015 - Swansea University

This event is a great opportunity for researchers, growers, industry and government agencies from all sectors (forestry, agriculture, horticulture, human health and livestock) to examine new tools and methods to accelerate the development and discovery of new Biopesticides.

- Biopesticides are widely used for controlling insects, mites, plant parasitic nematodes and disease-causing pathogens.
- Increasing demand for residue-free crop protection products, which have little or no negative impact on human health and the environment are key drivers of the biopesticides market.
- This meeting focuses on the advances made in the development of biopesticides for pest control.
